

Abstract of the Disclosure

A The present invention is directed to an edible greeting card suitable for ingestion
by a pet which comprises at least one substantially rigid edible panel having at least one
message region positioned on the front surface and/or back surface of the panel. At least
5 one edible message is provided within the message region and, in a preferred
embodiment, a plurality of messages are provided on the edible panels of the greeting
card. The edible message has a plurality of characters, each character being sufficiently
large so as to be perceived by the average human. In embodiments utilizing one or more
panels, edible joining devices are utilized to join the panels. The panels are positioned
10 within the vicinity of the pet so that the pet may view and ingest the panels and edible
message.
